WORK EXPERIENCE

International Business Machines (IBM) **Feb. 2026 – Present**

Experienced Full Stack Developer for Banking and Financial Markets, Japanese Bilingual *Quezon City, NCR*

- Deliver backend modules for a large-scale Japanese banking migration, using Java 17, Jakarta EE, Maven, MyBatis, Oracle, JUnit, and Mockito.
- Apply AI-assisted pair programming to generate initial module code from QA-reviewed Japanese .md specifications; independently integrate by hand, manually inspect, debug, and correct generated code before release.
- Translate Japanese technical specifications into production-ready business logic, contributing to 20+ migrated modules while maintaining financial and transaction integrity.
- Manually write and maintain 50+ JUnit/Mockito unit tests, including mocks, test data, database setup, exception handling, and verification of business logic and database interactions.
- Diagnose and manually resolve 20+ defects and edge cases through code-level analysis and Oracle database verification, reducing integration and release issues.
- Apply DevOps practices across automated architecture testing, CI builds, deployment, and release validation.

Advanced World Solutions **Jul. 2024 – Feb. 2026**

Full Stack Developer, Systems Migration Engineer (Legacy C# System → React + TypeScript, Node.js) *Makati, NCR*

- Participating in a long-term migration project transforming a legacy C# desktop system for a Japanese client into a modern web architecture using TypeScript, React, and Node.js.
- Achieved >95% feature parity and codebase modernization, introducing modular architecture and asynchronous data handling.
- Collaborated directly with Japanese engineers to clarify technical specifications, resolve ambiguous requirements, and ensure language-accurate system translation.
- Migrated over 20 production modules from a legacy C# desktop system to a TypeScript, React, and Node.js web stack for a Japanese enterprise client within the first year.
- Integrated Oracle PL/SQL through REST APIs for data persistence, query optimization, and transaction management within the migrated web modules.
- Closed over 40 verified bug-fix tickets, resolving defects across UI workflows, API integrations, and localized Japanese content.
- Developed and maintained unit and integration tests using Jest for each migrated module, ensuring ≥90% code coverage as a release criterion.

PUBLISHED LITERATURE

Temporal Analysis of Nighttime Lights and Vegetation Indices for Poverty Forecasting: A Recurrent Neural Network Perspective

- Head researcher for a study on remote sensing methodologies for poverty forecasting using vegetation indices and nighttime light intensity as key variables. Extracted data from Google Earth Engine and government databases, architected model design, and led analysis using recurrent neural networks.
- **Technologies**: Python, TensorFlow, JavaScript for Earth Engine

EDUCATION

Saint Louis University **Jul. 2024**

Bachelor of Science in Computer Science *Baguio, Benguet*

- Graduated Summa Cum Laude with a general average of 93.
